GENERAL INFORMATION

AGE OF SALE BULLS: 17-22 MONTHS OF AGE

After a change in our calving pattern to a winter calving for commercial reasons, the bulls we will offer for sale each year will be 17-22 months of age at our sale date.

SELLING SYSTEM:

Sale of bulls will be conducted as a ring sale auction. Video's of select bulls will be available on LM website and Auctions Plus. All bulls will be penned for inspection prior to the sale.

FERTILITY AND PHYSICAL EXAMINATION

All bulls have been examined for breeding and structural soundness. They have been semen tested and guaranteed for fertility.

WEIGHT AND MEASUREMENTS

Scrotal circumference measurements that appear in the catalogue were collected on November, 23rd 2022,. All bulls will be weighed prior to sale and these weights will be available on sale date. Max Bowman scanned all bulls for carcass evaluation on December 11th, 2020.

GUARANTEE

All Little Meadows bulls are guaranteed for up to three years from the date of sale. **We advise all clients to have insurance on their bull purchases for the first 12 months of service.** Every effort has been made to ensure our bulls leave Little Meadows in top working order. However, should any Little Meadows bull prove to be infertile or incapable of service we undertake to:

-Issue a refund equal to the purchase price less the salvage value and is calculated on the basis that the amount is reduced by one third for each year of service from the date of sale.

The guarantee covers the purchase value of the bull, without interest, cost and damages. The guarantee shall apply providing the bull's incapacity is not caused by injury or disease contracted since leaving Little Meadows. A veterinary certificate must be supplied by the purchaser upon request.

**DISCLAIMER

All information in this catalogue is believed to be true and correct. No responsibility taken for errors or omissions.

HEALTH

All bulls offered for sale have been tested PI negative and vaccinated with Pestiguard, Vibrovax & 7-in-1 and are guaranteed free of Brucellosis, TB, Mannosidosis and Johnes Disease. WA has been declared Johnes free and bulls can go to all states. Little Meadows is J-BAS 8.

RECESSIVE GENETIC CONDITIONS

All bulls are tested or are by inheritance, free of all genetic conditions. There are four main genetic conditions within the Angus breed. They are AM (Arthrogrochosis Multiple (Curly Calf); CA (Contractual Arachnodactyly (Fawn Calf Syndrome); NH (Neuropathic Hydrocephalus) and DD (Developmental Duplications). For the condition to be expressed, the undesirable gene needs to be present on both sides of the pedigree; both the sire and dam must be carriers.

SALE CONDITIONS

The conditions of the sale are those displayed on sale day by the selling agents.

Agents

-Elders

-Delaney Livestock Services

A 3% rebate is offered to outside agents who nominate their client(s) by email to littlemeadows6@bigpond.com 24 hours prior to sale. Agents must attend the sale with or on behalf of their client(s) in order to claim rebate.

DELIVERY OF BULLS

No bulls to be picked up or delivered on sale day.

We recommend that all bulls be insured that are remaining at Little Meadows. Bulls that remain at Little Meadows do so at purchasers risk.

THE LM ADVANTAGE

OUR FEMALE HERD

We carefully choose our genetics and each individual female is mated to a specifically selected sire which best suits its phenotype and EBV figures.

The primary focus of our program is the maternal function of our females. Mating decisions are always made with a vision of the female progeny uppermost in mind, rather than specifically setting out to breed bulls.

We believe in breeding roomy, wedge shaped females that have plenty of pelvic room to calve easily that also give our clients heavier calves at weaning.

CARCASE PROFITABILITY

We strive to continue to breed bulls with elite carcass weights, EMA and IMF figures and have tailored our breeding program to produce genetics that will produce higher quality beef to suit our higher valued markets, both domestic and export. The soft skin, smooth muscle pattern on our cattle has been noticed by many and we feel is a good indicator of fine meat quality.

The Little Meadows 2021 Sale Bulls are on average 21.63% above breed averages for EMA, 3.8% above breed average for Carcass Weight, 9.28% above breed average for 200 day weight, 5.16% above breed average for 400 day weight, 3.8% and above breed average for 600 day weight.

ACCURATE DATA

LM Angus has an extensive system to record all data so that it is accurate as possible. 100% of the LM herd is herd book registered (HBR) and on BREEDPLAN.

DEDICATED FAMILY

As a family we work together to make LM a leader in Angus genetics and ensure our customers are happy with their investment.

CUSTOMER SERVICE

We are committed to help our clients achieve their goals and back our animals. We have worked with clients to match their environment and production system to get the most profit gains using our leading genetics.

SIRE GUARANTEES

All LM bulls are guaranteed for up to three years from the date of sale. We believe a sale of any animal is the beginning of a relationship with a client, rather than a deal.

GENETIC CONDITIONS

There are four main genetic conditions within the Angus breed and all LM sale bulls are tested or are by inheritance free of them.

RING SIDE

As a family we have been showing cattle since 1982 and have done so to showcase the quality of our female family lines to the industry.

Sired by LM Nitro N37- Dam Is a Blue Roan commercial Angus Cow
PTIC to LM Royal Flush R65 (due to calve Mid March/April)

This Beautiful Blue Roan Angus Heifer has been kindly Donated by HM & OE Hopkins (Owen & Gwenda Hopkins)

PROSTATE CANCER RESEARCH HEIFER

Prostate cancer Foundation of Australia (pcFA) is Australia's leading community-based organisation for prostate cancer research, awareness, and support.

As the nation's predominant charity fund for Australian-based prostate cancer research, we exist to protect the health of existing and future generations of men in Australia and to improve quality of life for Australian men and families impacted by prostate cancer.

Prostate cancer is the most common diagnosed cancer in Australia and the **most commonly diagnosed cancer among Australian men**. There are about **1,763 men in the South West living with prostate cancer**.

It is recommended that men over the age of 50, or over the age of 40 with a family history, should talk to their doctor about testing for prostate cancer as part of their regular health check-ups. The prostate specific antigen (psA) test is the blood test used to detect an increased risk of prostate cancer.

For more information or support call the prostate cancer Specialist Telenursing Service on **1800 22 00 99** or visit: www.pcfa.org.au

Prostate Cancer
Foundation of Australia

THE BENEFITS OF BUYING YOUNG BULLS

The purchase and use of bulls 18 months or younger offers stock man lower bull costs but more importantly higher production and less injury throughout their working life.

Majority of seedstock producers in Western Australia sell two year old bull at auction however over recent years its been proven by producers in the East that this 'two year old system' is full of inefficiencies.

Bulls originally evolved to start working at 12 to 14 months of age when they are lighter and more agile, yet most Angus bulls in Australia aren't put out to work until they are two years of age. Often they are fed throughout this period and at auction have reached heavy, mature weights and are normally over conditioned.

Unfortunately this results in inefficiencies that only come out of the bull buyer's pocket.

Higher auction prices for over conditioned two year olds
Increased injury due to their heavy, mature weight and sexual inexperience
Higher maintenance costs

The average working life of a bull is less than three years and to us this is not a very satisfactory performance for one of the main operational costs of a beef enterprise.

Hence our move in using younger yearling bulls many years ago. Since then we have achieved some great results and knew by offering younger bulls to our clients it would not only boost their herds profitability but they would also reap the added benefits:

- A longer working life (25% increase or more)
- Significantly reduces costs per calf
- More calves on the ground
- Faster rates of genetic improvement
- Significantly less injuries due to superior fitness and lower levels of body fat.
- Easier management.

From clients and our own experience young bulls settle in better, mix with other cattle more easily and are easier to handle than older bulls. We believe this is because they are working at a much younger age and have not built-up the sexual frustration that encourages them to fight.

We would agree from experience that younger bulls can look unpleasant after their first joining season and due to

them being in their working cloths at a young age they probably wont reach their genetic potential for mature weight until they are three or four year olds. Nonetheless the relationship between the age of a bull at joining has proven to have no effect on the weight of his calves and should be seen as a benefit as it contributes to their higher levels of fitness and agility throughout their life.

"If the beef industry is to make progress we MUST purge our minds of the belief that a bull has to be fat and well grown to be any good. THE VALUE OF A BULL SHOULD BE MEASURED BY HIS OFFSPRING, NOT ON WHAT HE LOOKS LIKE!" Said cattleman Sandy Yates.

British bred yearling bulls will be sexually mature if they are prepared well. It is critical that our young sale bulls are rigorously culled if they are not well grown and aren't structurally sound. To ensure this we apply a strict weaning, nutrition practice to deliver bulls that are.

Well grown (14 months of age or older and averaging 550kg plus)

In sound condition (fat score of high 2 or low 3)

Sexually mature with a scrotal size greater than 35cm at 14 months of age

Docile and manageable

Mating management is extremely important when using young bulls in your operation and some guidelines should be meet.

Join them with up to 35 females in the first year and normal levels thereafter DON'T join them with older bulls. Join either by themselves or with other young bulls of the same age and weight A six to eight week joining period is recommended Check their body condition score, like any bull if he gets too lean (BCS <2, you risk him not performing)

Making the livestock industry more
EFFICIENT, SAFE & PROFITABLE

ProWay stock yards and livestock handling equipment has earned the reputation of being 'cutting edge' in terms of efficiency, safety, and stock flow.

This is why we have many repeat clients and why serious, progressive operators choose ProWay to design and build their stock handling facilities.

ProWay's innovative range is proudly designed and manufactured in Australia. We build yards to suit our clients specific requirements.

If you're considering updating your yards or livestock infrastructure talk to ProWay Livestock Equipment.

The choice of livestock professionals

KOJONUP FEEDS

WHERE QUALITY COUNTS

BALANCED FEED

We are a centrally located mill in the Great Southern focused on producing high quality, grain based pellets to achieve maximum performance. Our team of nutritionists can tailor a product to suit the needs of your herd.

Weaner Pellet

Dairy Pellet

Starter Pellet

Pasture Pellet

Finisher Pellet

For more information:

Call 0447 649 020 or email info@kojonupfeeds.com.au

www.kojonupfeeds.com.au

How to find the mill:

20km south of Kojonup on the Albany Highway or 130km north of Albany.

23368 Albany Highway, Kojonup

Entrance off Jingalup Road

Lot 53 **LITTLE MEADOWS STORMPROOF S154^{SV}** **WGA21S154**

☆ STAR BREEDER PROGRAM

BUY WITH CONFIDENCE

The STAR BREEDER program aims to maximise the reproductive integrity and health of stud and commercial stock.

A STAR BREEDER certified animal has been:

- ✓ Tested to show that they are not Bovine Viral Diarrhoea Virus (BVDV) Persistently Infected (PI) animals
- ✓ Vaccinated against Pestivirus (BVDV) to ensure they are protected from the effects of this infection
- ✓ Vaccinated against Leptospirosis, a reproductive disease and potential WH&S risk for cattle handlers
- ✓ Vaccinated against Vibriosis, a sexually transmitted cattle disease

You can be confident that every step has been taken to ensure these animals will not introduce preventable reproductive diseases into your herd. For more information talk to your Zoetis Cattle Representative, call **1800 963 847** or visit starprogram.com.au

We encourage all members to look for and support the Star Breeder Program.

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with an IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate a lower score.
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate a lower score.
	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a lower score.
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$A-L	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems. The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

RECESSIVE GENETIC CONDITIONS

This is information for bull buyers about the recessive genetic conditions, Arthrogyrosis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

Putting undesirable Genetic Recessive Conditions in perspective

All animals, including humans, carry single copies (alleles) of undesirable or “broken” genes. In single copy form, these undesirable alleles usually cause no harm to the individual.

But when animals carry 2 copies of certain undesirable or “broken” alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or “broken” genes.

Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

What are AM, NH, CA and DD?

AM, NH, CA and DD are all recessive conditions caused by “broken” alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

How are the conditions inherited?

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition.

For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as “carriers”.

What happens when carriers are mated to other animals?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele), and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

How is the genetic status of animals reported?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on Pedigree AM free - Animal has not been tested
AM_%	_% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an “Database Search” from the Angus Australia website or looking up individual animals listed in a sale catalogue.

Implications for Commercial Producers

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia's Breed Development & Extension Manager on (02) 6773 4618.

DISCLAIMER AND PRIVACY INFORMATION

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

: DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents.....

.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: Signature:

Date:

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au
